

## Recursion

Wednesday, 10 November 2021 9:07 PM

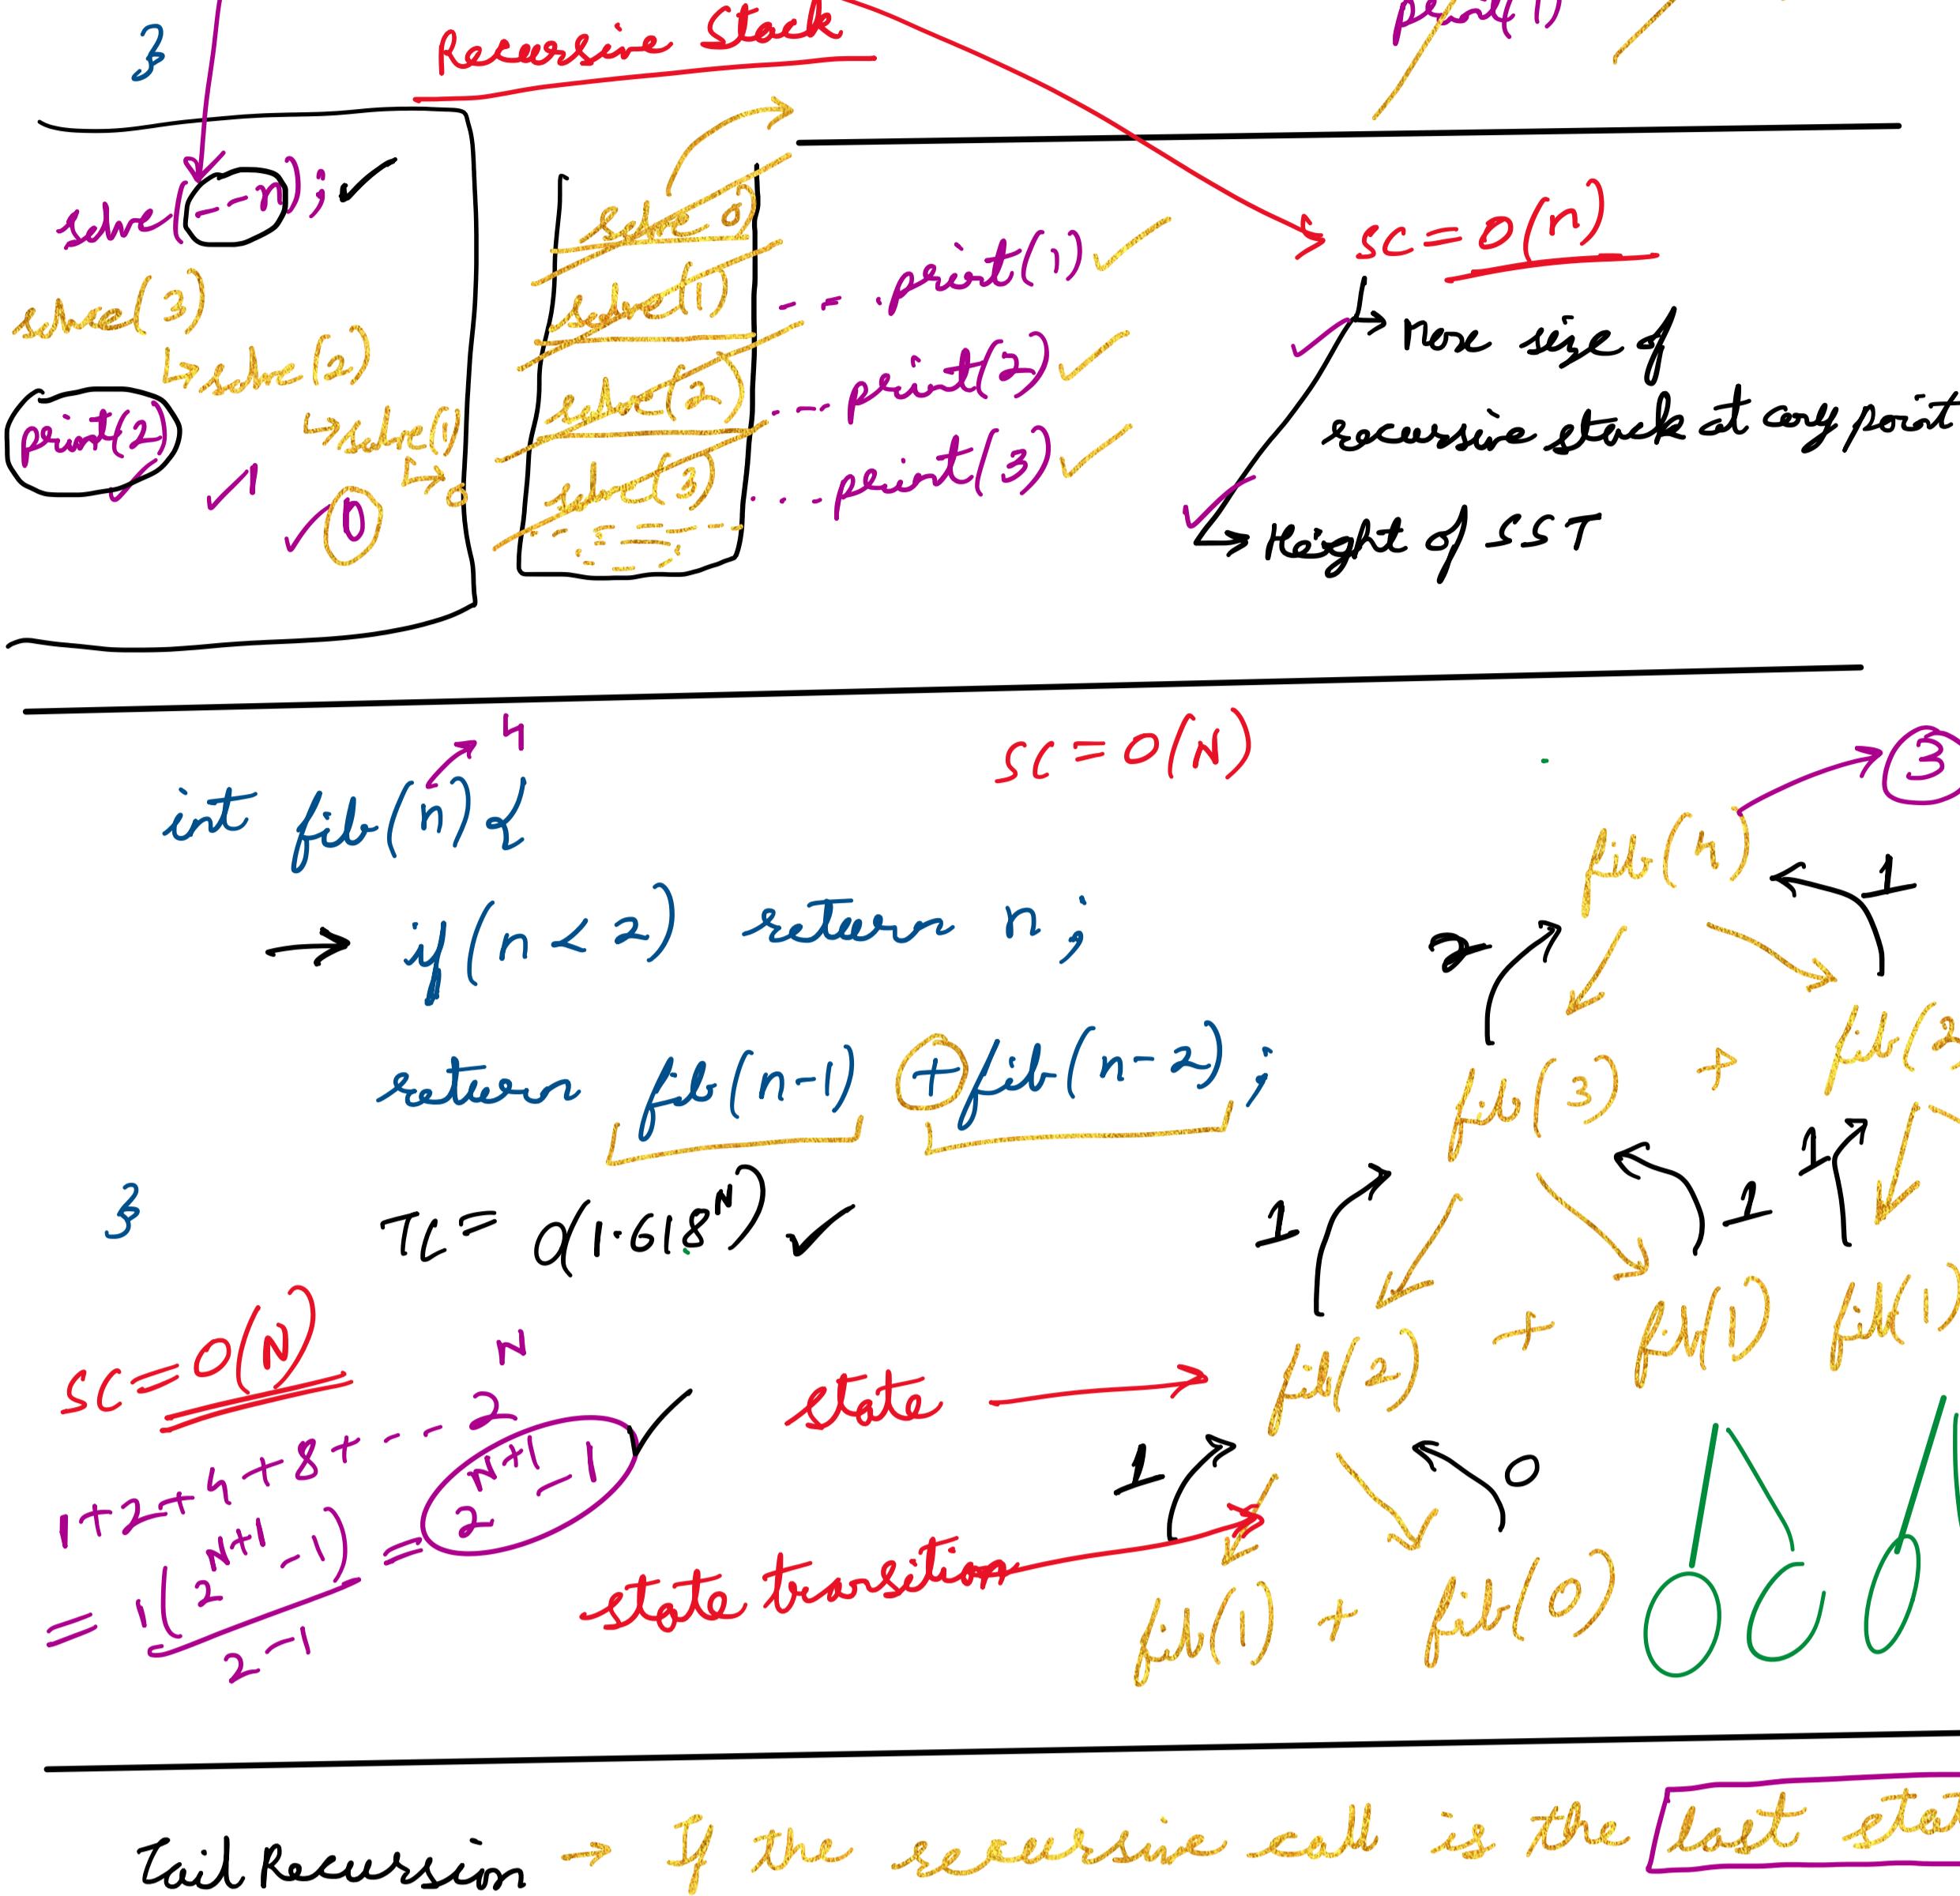

↳ Function calling itself.

```
void solve(n) {
    if(n <= 0) return; // Initialization ✓
    print(n);
    solve(n-1); // Recursive call ✓
}
o/p → 3 2 1
n=3
```

$a++;$   
 $+a;$

---

```
void solve(n) {
    if(n <= 0) return; // Initialization ✓
    print(n);
    solve(n-1); // Recursive call ✓
}
o/p → 1 2 3
```

---

```
int fib(n) {
    if(n <= 2) return n;
    return fib(n-1) + fib(n-2);
}
Tc = O(1.618^n)
sc = O(n)
```

$1+2+4+8+\dots = \frac{1}{2} \cdot \frac{n+1}{2} - 1$

state transition

Tail Recursion → If the recursive call is the last statement to be executed before function ends.

---

```
void solve(n) {
    if(n <= 0) return;
    print(n);
    solve(n-1);
}
o/p → 3 2 1
```

---

```
int solve(n) {
    if(n <= 0) return 0; sc = O(n)
    print(n);
    return n + solve(n-1);
}
Not a tail recursion because '+' will execute once recursive call is complete.
```

---

```
int solve(n, sum) {
    if(n <= 0) return sum;
    print(n);
    return solve(n-1, sum+n);
}
solve(3, 0)
→ solve(2, 0+3)
→ solve(1, 3+2)
→ solve(0, 5+1)
```

Time Complexity of Recursive Function (not always possible to compute)

---

```
void solve(n) {
    if(n <= 1) return; Tc = ?
    print(n);
    solve(2 * n / 3);
}
n → 2n/3 = n/3 + n/(1.5)
```

$$n = (1.5)^k \Rightarrow k = \log_{1.5}(n)$$

$$Tc = O(\log_{1.5}(n))$$

Master Theorem

$$T(n) = a * T(n/b) + O(n^d)$$

$$a > 0 \quad b > 1 \quad d \geq 0$$

$$b^d = a \rightarrow O(n^d)$$

$$b^d = a \rightarrow O(n^d \log_b(n))$$

$$b^d < a \rightarrow O(n^{d/b})$$

$$O(n^d) > O(n^d)$$

$$O(n^d) = T(2n/3) + O(1)$$

$$a = 2 \quad d = 0$$

$$b = 3/2 = 1.5$$

$$b^d = 1.5^0 = 1 = a$$

$$O(n^0 \log_{1.5}(n)) = O(\log_{1.5}(n))$$

$$T(n) = 2 T(n/2) + O(n)$$

$$a = 2 \quad b = 2 \quad d = 1$$

$$b^d = 2^1 = 2 = a \quad Tc = O(n \log_2(n))$$

$$T(n) = 3 T(n/3) + O(n^3)$$

$$a = 3 \quad b = 3 \quad d = 3 \quad Tc = O(n^3)$$

Given an integer array A & an integer B. Count of non-empty subsequences of A of size = B having sum  $\leq 1000$ .

$$A = [400, 500, 300, 800, 100, 50]$$

$$B = 3$$

$$\text{Ans} = 3$$
